

HOW TO ACCESS YOUR CHANNELS

What is a Channel Scan?

After installing a new digital television, you will need to scan for new channels to ensure you receive all the digital stations broadcasting in your area.

How do I Perform a Channel Scan?

- Run the “scan” function on your digital television set, usually on the remote control, labeled “set-up” or “menu” or some similar term. Consult the owner’s manual for more detailed instructions on how to run a channel scan.
- Once the scan is complete, you should be receiving digital channels.

What Channels Should I Receive?

See channel guide that has been provided to you. Your line-up contains channels 2-78

What if it's Not Working?

If you have any problems with your video services, please email support@studenthousingtechnologies.com. Please use your complex name and unit # as the subject of your email. **Remember your television must have an internal QAM tuner to receive digital stations.** Most televisions manufactured after 2005 have this tuner.
